Allowable Subject Matter

Claims 1-13 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention is directed to a flow verification sensor apparatus for use with a constant volume pump that pumps a liquid product from a container. Each independent claim identifies the uniquely distinct features "a flow verification sensor comprising a plummet positioned in the bore of the flow tube, a sensor positioned proximate the flow tube at an upward distance from the lower end and a timer for measuring the length of time for the plummet to move from the first position to the second position after activation of the pump". The closest prior art, Schrandt (US 5,695,092) and Brown et al. (US 4,938,072) disclose conventional fluid flow measuring system, either singularly or in combination, fail to anticipate the above limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art of Hon (US 4,856,343), Jorritsma (US 4,669,308) and Arvidson et al. (US 5,877,417) are cited to show a variety of fluid flow measuring systems.
